

# GRAB AND GO REFRIGERATION

Multidecks, Sandwich Chillers and Pastry Chillers

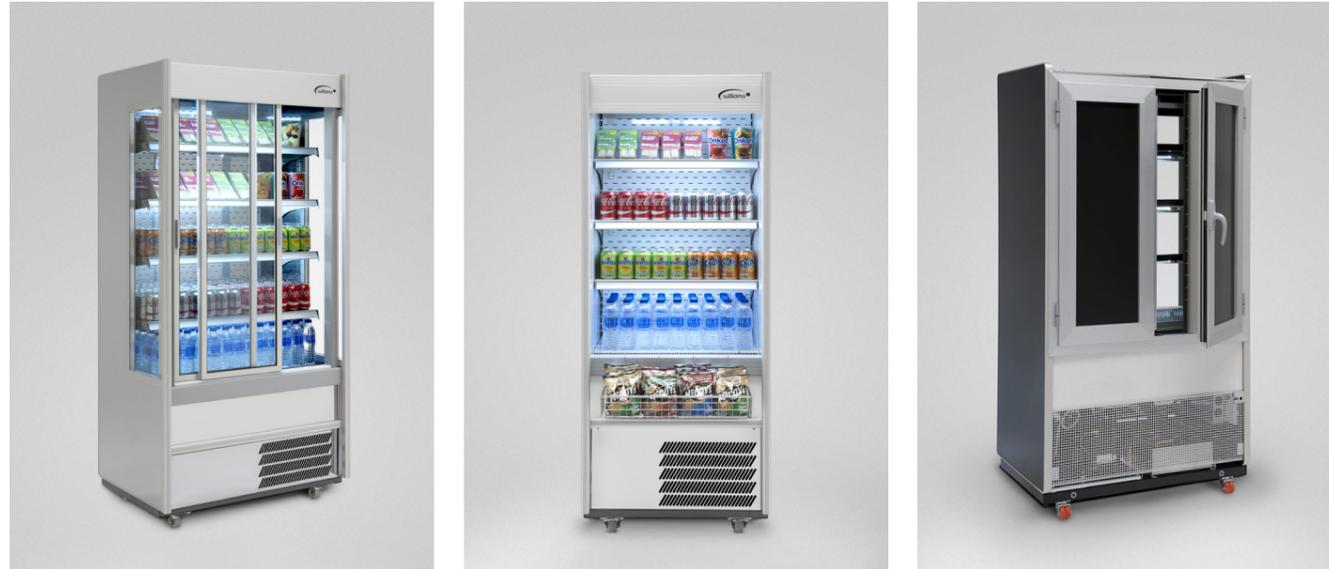

## GRAB AND GO REFRIGERATION

We're all pressed for time these days, so eating on the go has become the norm. This has led to a dramatic rise in the number of coffee and sandwich shops, making 'Grab and Go' the fastest growing sector in the hospitality industry.

Retailers have been gearing up their establishments to suit. For example, most supermarkets now have their own cafe or sandwich shop, as well as quick purchase checkouts.

Meanwhile convenience stores have the right locations and product range to target a share of the 'Out of Home' foodservice market. And garage forecourts are tailoring their foodservice offers to appeal to consumers on the move.

As the sector grows, Grab and Go operators are developing specialist foodservice offerings that make specific demands on refrigeration. That's why Williams has developed a range of refrigeration that precisely meets the needs of the Grab and Go sector.

## GEM MULTIDECKS

Williams has been supplying top of the range Multidecks for many years – the growth of the Grab and Go sector means they have never been in such demand.

The stylish design of the Williams Multideck range not only improves your front of house display, it also maximises every inch of retail space.

We offer a range of Multidecks, in both slimline and standard versions, that offer easy customer access while attractively displaying drinks, prepacked snacks and dairy products.

To enhance the range, and optimise your merchandising potential, a variety of options are available, including easy-fitting snack selection baskets, lockable security night shutters or night blinds, mirrored panels and illuminated shelving.

Advanced airflow technology guarantees consistent temperature control, between +3°C / +5°C, so products are kept fresh and safe, while your business conforms to HACCP legislation with minimal effort.

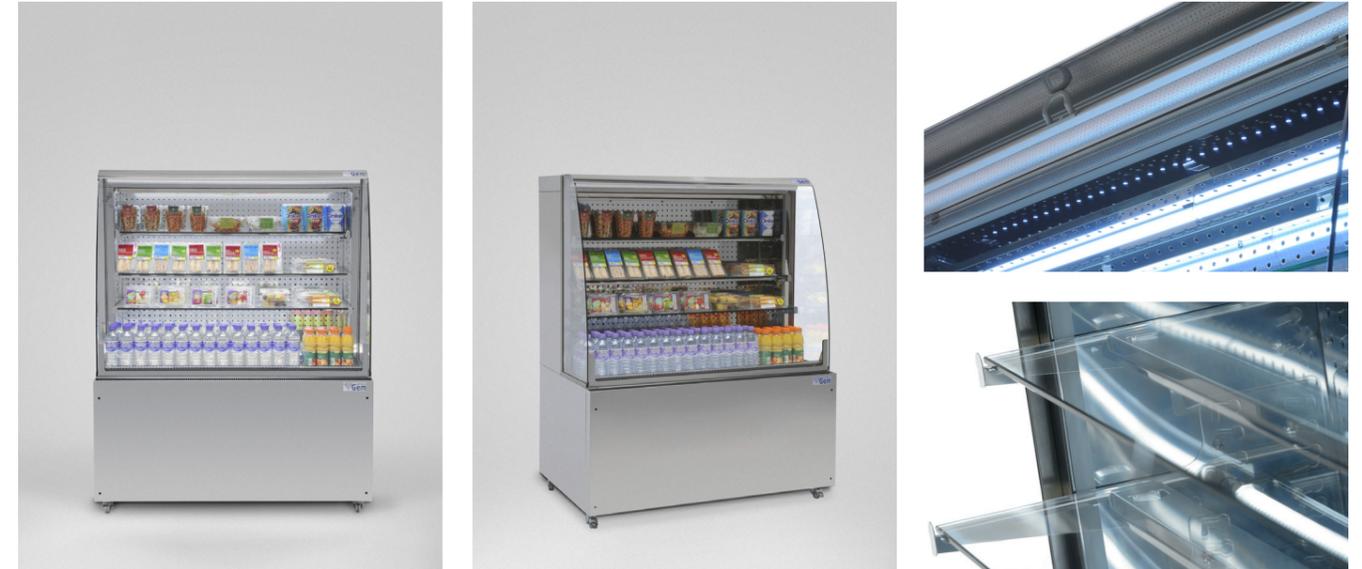

To meet the specific demands of the Grab and Go sector, we have developed several new features and options for the Multideck range:

- **Front sliding doors** - smooth operating, easy access and guaranteed uniform temperatures.  
Keeps your products safe and fresh while significantly reducing your energy consumption
- **LED strip lighting** fitted as standard – offering great energy savings and improved visibility of merchandise
- **Rear loading doors** to provide easy access for quick restocking

- **A full range of colours** to suit your décor or to truly stand out from the crowd
- **Removable EPOS ticket strips** for improved merchandising

The new models also feature fully adjustable shelving and an easy to use, clear display digital controller.

They are supplied on castors as standard, with extra levelling feet for stability.

## GEM SANDWICH CHILLERS

Visually striking, the Gem Sandwich Chiller has an attractive but robust stainless steel exterior and foodsafe, stainless steel interior. Its open front makes it ideal for easy customer access.

Its refrigeration system works from beneath the cabinet, meaning that there is no front, rear or side grill, so the unit's lines are attractively smooth, yet it can be sited against the wall and fit flush between other display units.

Its tempered glass shelves and curved tempered glass surrounds ensure all-round clear visibility, while the bright white energy saving LED lighting delivers extra eye-appeal. Every inch of space is maximised for display even down to the lighting - the LEDs take less space than a conventional fluorescent strip, so there's more room for product.

The new Gem models have an enhanced, thermostatically controlled forced-air refrigeration system providing an air curtain that guarantees even temperature control between +2°C / +5°C, ensuring merchandise is kept fresh and appealing.

The advanced refrigeration system also enables the unit to achieve a very fast 'pull down time' to temperature from ambient. (Up to 75% quicker than other display equipment in the market). This not only saves you time when restocking but means a reduction in energy consumed.

The Sandwich Chiller features an easy-to-use controller, with clear digital temperature display. There are two model sizes to choose from, with widths of 900 and 1200mm. Shelving is fully adjustable for maximum flexibility and the unit is supplied on castors for easy positioning.

It comes complete with an easy to operate night blind with retention feature.

- Attractive but robust stainless steel finish
- Innovative new energy saving 'air curtain' concept
- Self-retracting night blind minimises energy use during quiet periods
- Canopy and under shelf energy saving LED strip lighting
- Designed for effective operation of +2°C / +5°C in 25°C ambients (Climate Class 3)
- Removable, adjustable shelves for flexibility and ease of cleaning
- Tempered glass sides for all round visibility
- Effective refrigeration system and high performance insulation means temperature pull down times are very fast

## GEM PASTRY CHILLERS

Also part of the Gem range is our Pastry Chiller (PC) Series. Offering all the great features and benefits of the SC Series, the new Pastry Chillers are perfect for front of house display.

They are supplied with a hinged curved glass front providing easy access for cleaning whilst the rear doors give staff easy access for restocking and serving.

Whilst the SC's open front makes it perfect for Grab and Go service, the Pastry Chiller's closed glass front makes it ideal for displaying all types of fresh cakes and pastries in a 'Serve Assist' operation.

The Pastry Chiller is operational at a temperature of +5/+8°C for extra delicate products. Like the SC Series, the Pastry Chiller has tempered glass sides and shelves which, with the glass front, provide all round superior visibility. It comes complete with bright white LED lights fitted as standard.

As well as reducing energy consumption, compared to conventional fluorescent strip lighting, the LED lights further enhance the display.

The Pastry Chiller's advanced refrigeration system enables the unit to achieve a very fast 'pull down time' to the required temperature from ambient, not only saving time when restocking but also reducing energy consumption.

- Attractive, highly mirrored stainless steel finish
- Canopy and under shelf energy saving LED strip lighting
- Designed for effective operation of +5°C / +8°C in 25°C ambients (Climate Class 3)
- Removable, adjustable shelves for flexibility and ease of cleaning
- Tempered glass sides for all round visibility

- Effective refrigeration system and high performance insulation means temperature pull down times are very fast

## BACK OF HOUSE REFRIGERATION

To complement the Gem range of front of house display equipment, Williams manufactures a wide range of refrigerated cabinets and counters in numerous configurations and with a raft of options to suit your application.

These include the Amber and Aztra range of products, which are perfect for storage of Grab and Go produce.

### CABINETS

The Amber and Aztra range of products are already popular favourites with cafes and sandwich shops.

- High performance, front vented refrigeration system
- CoolSmart controller for reduced energy consumption
- Designed to operate effectively in ambient temperatures of up to 32°C
- Barrel locked doors for added security on Amber models
- Low GW, zero ODP polyurethane insulation
- Adjustable feet as standard
- Ideal for noise sensitive areas

### OTHER PRODUCTS

Williams Refrigeration offers over 300 individual product items including cabinets and counters in a variety of formats as well as blast chillers, coldrooms and specialist bakery equipment.

Other equipment such as ice machines and dishwashers are also available through our group of companies.
